

CUE PATCH NOTES

Version 1.14.43 – January 18th, 2016

CUE 1.14.43 is the latest release for our RGB line of peripherals and contains a multitude of changes and enhancements.

Fixes / Improvements

- Resolved an issue with the color wheel defaulting to 0/0/0.
- Resolved an issue with Spiral Rainbow and CUE Link.
- CPU resources will not drastically increase due to multiple user login.
- Improved the rate of devices being detected after the system wakes from a sleep state.
- Resolved other minor bugs and issues.

Important Note

During a firmware or software update for any Corsair peripheral, CUE may need additional components and time from a Window's Driver Software Installation to complete the process.

If you have to abort at any part of the process, simply reconnect the device and select Update Firmware from the Devices -> Settings Menu, and choose "Force Update from Server" to re-initiate the update.

Keyboard Connectivity

Connecting via USB 3.0:

Use one connector (the one with the keyboard icon) when connecting via USB 3.0

Connecting via USB 2.0:

Use both connectors when using USB 2.0.*

* Plug in the connector with the two arrows icon first, and the connector with the keyboard icon second.
